- [Receive immediate asset status and whereabouts](#)
- [Track and manage maintenance and calibration requirements, annual inspection and maintenance cycles](#)
- [Manage warranty and lease expiration](#)
- [Automate asset tracking in a user-friendly, real-time system](#)
- [24/7 Global Customer Support](#)

In today's complex and highly competitive business world, where data are often compartmentalized in separate business systems or stored in corporate silos, the need for systems to automatically track the movement of assets and provide real-time situational awareness has never been greater. Access to information on the flow of business assets can be essential to remaining competitive and fine-tuning your business operations.

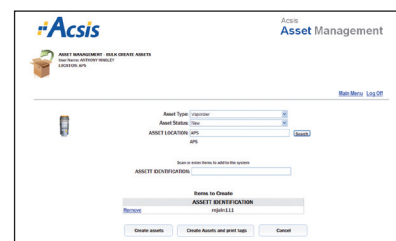

Available under the ProducTrak Suite of products, Acsis Asset Management tracks and manages assets throughout their complete life cycles.

Acsis Asset Management is a multi-user, web-based solution offering global visibility to your company's assets from any authorized computer or mobile device. The standard solution offers multiple language settings, based on a given user profile.

This Acsis solution allows you to track and manage individual assets by scanning the asset identifier—with barcode or RFID reader, for example—to identify its location. This allows organizations to improve accuracy, meet audit requirements, monitor lease and warranty expiration, calculate depreciation, and audit the use of the asset. It allows for personalized settings to facilitate business rules, such as process conditions, triggers and user permissions.

Acsis Asset Management automates processes by interfacing with data-capturing technology, such as wedge scanners, wireless mobile barcode devices, or RFID devices. The solution also tracks mass movement of assets by aggregating assets to pallets or containers for shipping and receiving. Although it can operate as a standalone system, Acsis Asset Management can integrate with third-party business applications and external systems to leverage existing investments.

Acsis Asset Management can track and maintain assets, maintenance schedules, and exception alerts—all in real time

Acsis ProducTrak™ Asset Management

Acsis Asset Management: Optimizing the process

By automating and providing complete visibility into the processing of assets and packaged products, the Acsis Asset Management solution offers organizations the ability to significantly increase operational efficiency and enable financial responsibility. With this comprehensive solution, businesses are better able to:

- Manage deposits, rentals, and purchases
- Plan asset requirements and avoid unnecessary purchases
- Enable new customer relationships through VMI and consignment
- Leverage SAP and hardware investments
- Reduce the risk of complying with industry regulations
- Lower total cost of ownership with a high degree of configurability
- Cut back on the number of assets with a higher turn of assets
- Collaborate with third parties – including manufacturers, warehouses, distributors, and customers

Acsis ProducTrak Asset Management allows for individualized asset control by including time-sensitive criteria—for example, expiration or required calibration dates—and other context data relevant to the asset or type of asset.

Reporting, asset status displays, warnings and e-mail alerts are all in real time, allowing immediate and proactive management decisions, confirmations and actions, as required. Because communicating this information can be important, reports can be easily exported to several common formats, including PDF and Microsoft® Excel®.

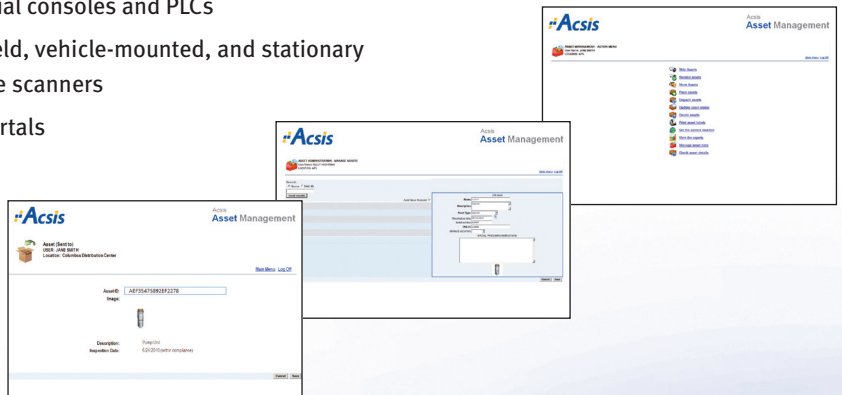

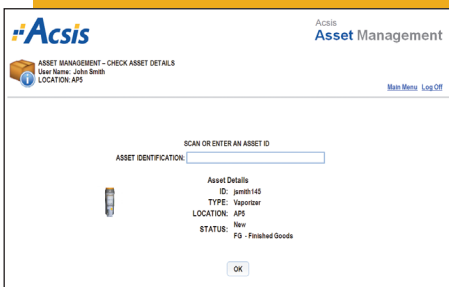

Acsis Asset Management includes three layers of functionality, each tailored to specific business roles:

- **Transaction Management** – integrates with your devices and sensor networks to collect basic data
- **Process Management** – automates your operational processes, integrates data, and adds additional context to your data
- **Business Management** – improves situational awareness with actionable dashboards for managing key areas of your manufacturing and supply chain operations

Multiple Device Support

Acsis Asset Management is hardware- and software-agnostic, and supports technology from a wide variety of vendors, including:

- Stationary and mobile RFID readers (HF and UHF)
- Industrial consoles and PLCs
- Handheld, vehicle-mounted, and stationary barcode scanners
- Web portals
